

Environmental policy

For Navigent Group and subsidiaries

Through efficient energy production and upgrading of biogenic waste, Navigent Group offers help to industries and infrastructure to reduce carbon emissions and energy waste.

By combining several business areas with practical application within the same group – from analysis to installation – we accelerate the transition and strengthen both resilience and competitiveness in low-carbon economies.

Collaboration with suppliers regarding transport and materials is a natural part of our development work, and we will choose the best available technology through detailed evaluation to ensure that the customer gets the right prerequisites to reduce their carbon footprint.

We are committed to complying with applicable laws and requirements, working for continuous improvement and integrating environmental considerations into all decisions. Through efficient use of resources, reduced emissions and sustainable sourcing, we contribute to a better environment for current and future generations.
